

Instalación: Complementos Web (IIS)

Esta sección esta dedicada a las configuraciones que se deben realizar para utilizar la nueva versión de Powerbuilder.

La siguiente instalación Sólo es requerida si el framework .Net esta desactualizado. Versiones anteriores a 4.7

En el siguiente [link](#) se explica el proceso de instalación de los complementos [Web Deploy](#) y [ASP.NET Core Hosting Bundle](#).

Siga el proceso de instalación según la siguientes imágenes.

The image displays two screenshots of the PowerServer 2022 Help documentation page for Tutorial 5: Hosting Web APIs in IIS (in-process hosting). The first screenshot shows the 'Table of Contents' with 'Installing Web Deploy' highlighted. The second screenshot shows the 'Table of Contents' with 'Installing ASP.NET Core Hosting Bundle' highlighted.

Tutorial 5: Hosting Web APIs in IIS (in-process hosting)

In-process hosting vs. out-of-process hosting

Preparations

Installing IIS

Creating an IIS website

Configuring IIS

Configuring SSL on IIS

Installing Web Deploy

Installing ASP.NET Core Hosting Bundle

Publishing and deploying Web APIs to IIS

Deploying multiple Web

Installing Web Deploy

You will need to install the Web Deploy supporting tool if you want to deploy the Web APIs to IIS [using the "Web Deploy" method](#). (To use the "Folder" method, you can ignore this section; there is no need to install Web Deploy).

Note

Web Deploy must be installed **after** IIS is installed. If you have installed Web Deploy before IIS, uninstall Web Deploy and then choose the **Complete** setup type to install it again; do not use the **Modify** feature to re-install Web Deploy.

Step 1: Download Web Deploy 3.6 (or later) from <https://www.microsoft.com/download/confirmation.aspx?id=43717>.

Step 2: (IMPORTANT) Make sure to select the **Complete** setup type when installing Web Deploy.

Microsoft Web Deploy 3.6 Setup

Choose Setup Type

Choose the setup type that best suits your needs

Typical

Installs the most common program features. Recommended for most users.

Custom

Allows users to choose which program features will be installed and where they will be installed. Recommended for advanced users.

Complete

All program features will be installed. Requires the most disk space.

Installing ASP.NET Core Hosting Bundle

ASP.NET Core Hosting Bundle is required if you want the IIS process manager to automatically launch the client app and the Web APIs deployed to the IIS website. You will need to install this component, no matter which method ("Web Deploy" or "Folder") you will use to deploy the Web APIs.

Download and install ASP.NET Core Hosting Bundle 3.1 from <https://dotnet.microsoft.com/download/dotnet/thank-you/runtime-aspnetcore-3.1.13-windows-hosting-bundle-installer>.
